### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or suggest a method or apparatus comprising computing a clinical state vector as a combination of a plurality of parameters related to a patient's heart failure status, wherein the plurality of parameters define an n-dimensional vector space with n being the number of parameters and with each parameter mapped to an ordinal scale that represents a coordinate axis in the n-dimensional vector space and further wherein the n parameters include at least one parameter derived from a sense signal from sensed cardiac activity; and computing a difference vector between the computed clinical state vector and a previously computed state vector wherein the magnitude of the difference vector indicates the extent of change in the patient's heart failure status and the direction of the difference vector indicates whether the patient's heart failure status is improving or worsening

Hirsh (2003/0083582) shows computing a clinical state vector as a combination of a plurality of parameters. Hirsh does not show computing a difference vector, rather Hirsh teaches determining the degree of physiological stress by the vector cross product of the current clinical state vector (hemodynamic state vector) and the previous clinical state vector ('Normal' vector). The cross product results in a scalar rather than in a vector, thus it does not have a magnitude indicative of the extent of the change, nor a direction indicative of improvement or worsening.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
